### Week 3 – 1:

--Coding-C-Language Features-Optional.

ROLL NO.:240801190

Name: Manikandan S

Q1) Write a program to read two integer values and print true if both the numbers end with the same digit, otherwise print false.

Example: If 698 and 768 are given, program should print true as they both end with 8.

Sample Input 1

25 53

Sample Output 1

false

Sample Input 2

27 77

Sample Output 2

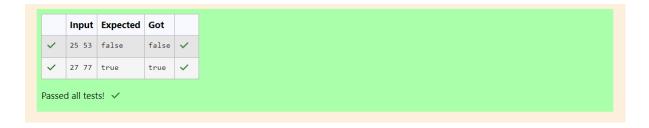

true

#### Code:

```

          Duration 58 days 2 hours
Ouestion 1
                    Write a program to read two integer values and print true if both the numbers end with the same digit, otherwise print false.
Correct
                    Example: If 698 and 768 are given, program should print true as they both end with 8. Sample Input 1 25 53 Sample Output 1
                    false Sample Input 2 27 77 Sample Output 2 true
Marked out of
```

Flag question

```
Answer: (penalty regime: 0 %)
   1 #include<stdio.h>
      int main()
   3 ₹ {
   4
           int a,b;
           scanf("%d%d",&a,&b);
           int ld1 = a\%10;
           int 1d2 = b%10;
   8
          if (ld1 == ld2)
          printf("true");
  10
           else
           printf("false");
  11
      }
  12
  13
```

Task

Given an integer, n, perform the following conditional actions:

- If n is odd, print Weird
- If n is even and in the inclusive range of 2 to 5, print Not Weird
- If n is even and in the inclusive range of 6 to 20, print Weird
- If n is even and greater than 20, print Not Weird

Complete the stub code provided in your editor to print whether or not n is weird.

**Input Format** 

A single line containing a positive integer, n.

Constraints

• 1 < n < 100

**Output Format** 

Print Weird if the number is weird; otherwise, print Not Weird.

Sample Input 0

3

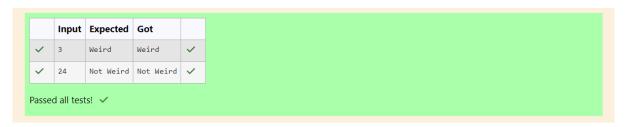

Sample Output 0

Weird

Code:

```
#include<stdio.h>
   int main()
 2
 3 ₹ {
        int n;
 4
 5
        scanf("%d",&n);
        if (n%2 !=0)
 6
        printf("Weird");
 7
        else
 8
 9
        if (n>=2\&\&n<=5)
        printf("Not Weird");
10
        else if (n>=6\&\&n<=20)
11
        printf("Weird");
12
13
        else if (n>=20)
        printf("Not Weird");
14
15
        return 0;
16
   }
17
```

# OUTPUT:

the square of the third.

For example, 3, 5 and 4 form a Pythagorean triple, since 3\*3 + 4\*4 = 25 = 5\*5You are given three integers, a, b, and c. They need not be given in increasing order. If they form a Pythagorean triple, then print "yes", otherwise, print "no". Please note that the output message is in small letters.

# Sample Input 1

3

5

4

# Sample Output 1

Yes

Code:

```
#include<stdio.h>
1
    int main()
 2
 3 ▼ {
        int a,b,c;
 4
 5
        scanf("%d%d%d",&a,&b,&c);
        if ((a*a+b*b==c*c)|
 6
 7
        (a*a+c*c==b*b)||
        (b*b+c*c==a*a))
 8
9
        printf("yes");
        else
10
        printf("no");
11
        return 0;
12
13
   }
```

### OUTPUT:
